Hacks for passing the AWS SA Pro

COLD!

(5 easy tricks to help you pass)

1 SKIP THE HARD STUFF

If the answer isn't immediately apparent or you are not completely convinced of your answer, mark for review and move on quickly. Other questions can give you clues that can help you when you review later.

2 FOCUS ON THE KICKER

Most performant? Least expensive? Most secure? The final line of the question is what really matters.

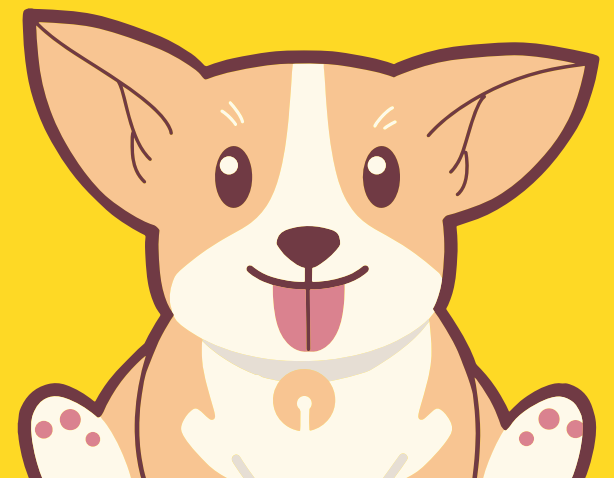

3 TWO AND TWO

Exam answers often come in patterns that are 2 and 2. Two sets of answers will be very similar to each other. You can use this to eliminate half the answers and improve your guessing percentages.

4 ALWAYS PICK THE CLOUD

Some questions will ask if you should use AWS or build the thing yourself on instances. Choosing the AWS service is almost always the right answer. This is an AWS test after all.

5 PEAK PERFORMANCE

Morning person? Afternoons?
You have flexibility to take the
exam at any time so take it
during the window of time
that benefits **you** the most.

Temet Nosce

(know thyself)

WHY DID I DO THIS????

TL;DR PluralSight bought
ACloudGuru and we were still
working on the switch.

Don't be like me. Plan ahead
and **study**.
